

## Exercise Sheet: Open Source Software, Code Repositories and Licenses

### 1. Sustainable Software Project

Pick a small software project of your choice or reuse the Java project of a previous exercise sheet as basis. Install Git.

Create a git repository for the project and

- a. structure the project and clean up the code
- b. ensure that unwanted files are not committed using the .gitignore
- c. create a minimal documentation based on the typical structure presented in the lecture

### 2. Add Licenses

Use the same project as basis.

- a. Install the reuse tool: <https://github.com/fsfe/reuse-tool>
- b. Annotate license information, either using *reuse annotate* or manually
- c. Use *reuse lint* to check if everything is correct

Compress and upload the project.
